

How to Setup VPN Access to Goucher Network for a Mac

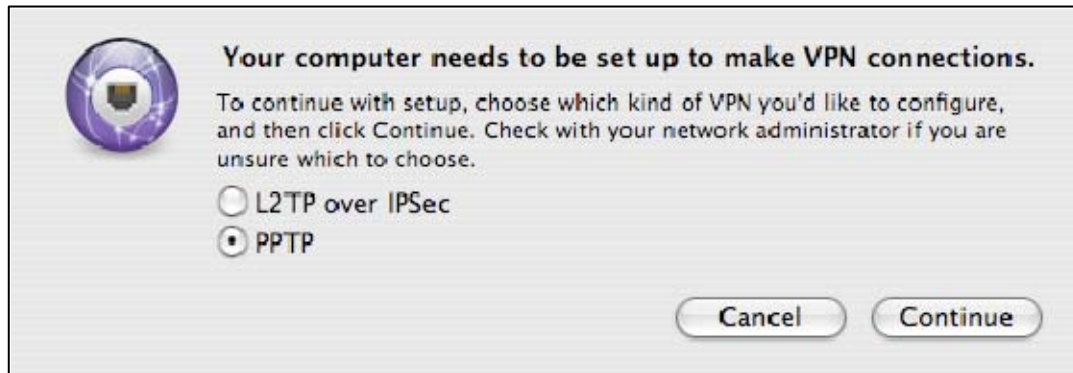

These instructions will only work on Macs with OS version 10.3 or higher. If you have a Mac with an OS that's less than 10.3 you will have to bring your computer to the Help Desk for configuration.

Connecting via VPN

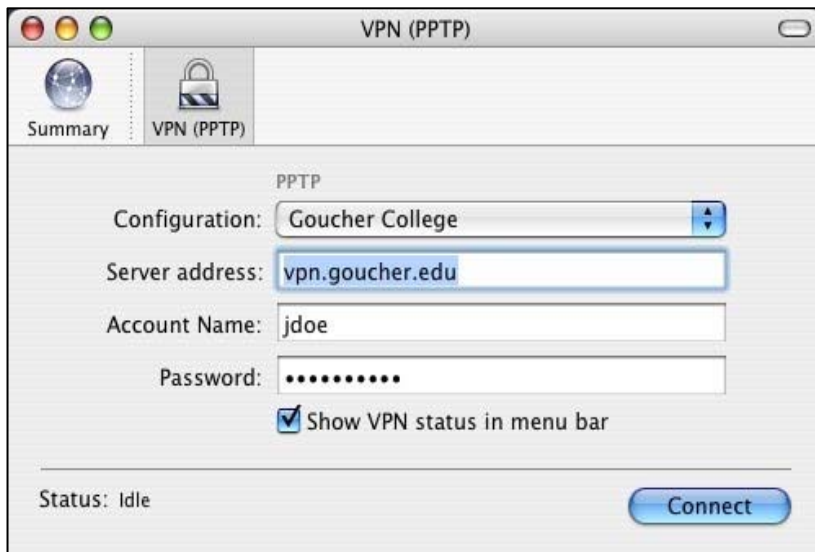

Click on the **Go** menu from the Desktop.

Select **Applications** and then double-click on the **Internet Connect** icon.

Click on the **VPN** icon and another window will appear.

Check the **PPTP** option and then click **Continue**.  **Please note:** You may be prompted to enter the local administrator password to continue with the setup.

In the configuration section, click the arrows and select **Edit Configurations**. Type **Goucher VPN** in the description field.

In the **Server address** field type **vpn.goucher.edu**.

Type your Goucher username in the Account Name field and then enter your Goucher password.

Click **Connect** to access Goucher network.

 **Note:** Check your firewall and Internet settings if you are unable to connect.

Accessing User Folder

In order to access **Darwin** you will need to do the following:

Click on the **Go** menu from the Desktop.

Click on **Connect to Server**.

In the Server Address field type **smb://10.32.3.34** and click **Connect**.

A dialog box will appear asking for your username and password.

In order to access **Magellan** you will need to do the following:

Click on the **Go** menu from the Desktop.

Click on **Connect to Server**.

In the Server Address field type **smb://10.32.3.62** and click **Connect**.

A dialog box will appear asking for your username and password.

To disconnect the VPN connection, simply click on the icon located left of the timer on the menu bar then select **Disconnect**. FYI, please make sure to disconnect from VPN before surfing the Internet because its performance will dramatically decrease while connected.

Note: If you have multiple computers connecting to the Internet using a DSL or cable modem, you can only have one machine establishing VPN connection to the Goucher network.
