AP 518.100.17SU: Preparing Students for Advanced Placement Computer Science A

This course will provide an overview of the content and structure of the AP Computer Science A curricula. Teachers will focus on object-oriented programming methodology, with emphasis on problem solving and algorithm development. Participants will explore how the development and analysis of standard algorithms and the use of fundamental data structures within the AP Computer Science framework can support their classroom instruction in preparing their students for the AP Computer Science exam. Focus also will be placed on both multiple-choice and free-response aspects of the exam, including the introduction of *Magpie*, *Picture* and *Elevens*, the newest lab components to support hands-on lab experiences. It is advisable that participants be familiar with Java.

Dates and times

This week-long program will run from 8:30am to 4:00pm Monday (6/19) through Thursday (6/22), and from 8:30am to 1:00pm on Friday (6/23).
The lab will be open from 7:00pm – 10:00pm Monday through
Thursday evening. We will be meeting in Julia Rogers (Room 128)
